DemoPackage is a nearly empty R package for you, the R programmer, to adopt and adapt to your own purposes.

Vignettes are an amalgamation of R code and TeX documents. They can be bewildering. A possibly useful example is the one I wrote for the RCytoscape package, which can be obtained using these steps:

- Browse to <http://bioconductor.org/packages/release/bioc/html/RCytoscape.html>
- Download *Package Source*
- Extract the vignette file (but note that the version number will very likely be different):

```
tar xzf RCytoscape_1.2.1.tar.gz RCytoscape/inst/doc/RCytoscape.Rnw
```

- Study and/or steal from this file: *RCytoscape.Rnw*.
